

Aquatics Health Monitoring and Diagnostics

World-class aquatics expertise
at your fingertips.

IDEXX **BioAnalytics**

Plan an aquatics health monitoring program specific to you.

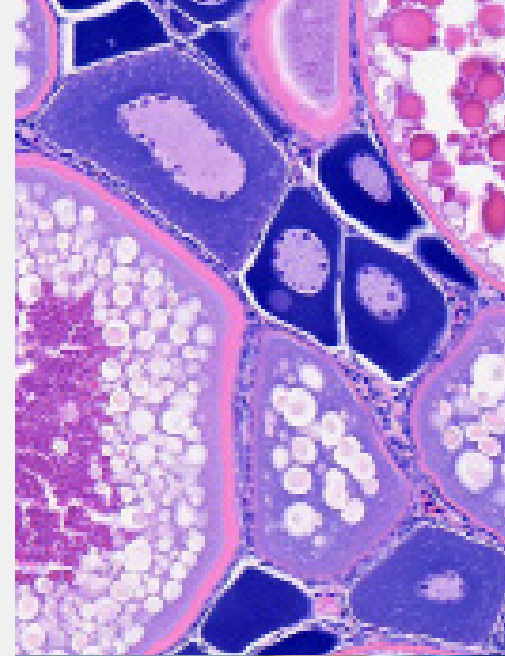

Consult with industry-leading experts in aquatic diagnostics for tailored biosecurity solutions. Build an animal or environmental health monitoring and new embryo entry program from the largest aquatics portfolio of assays in the industry, designed specifically for your facility, species, and workflow.

Prepare your samples for submission.

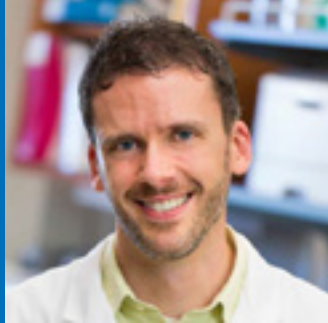

Submit whole animals, tissues, and environmental samples for species-specific customized real-time PCR testing panels, microbiology, and histopathology. Quick results, rigorous quality control, and flexible testing schedules without prebooking that ensure healthy animals for reliable research findings. Expect unrivaled support with data interpretation and colony management.

Protect your facility from the unexpected.

Receive comprehensive support for unexpected events to safeguard people from zoonotic diseases, preserve unaffected animals, and prevent future issues. Personalized consultation with our scientists and pathologists help swiftly address infectious and non-infectious causes of morbidity in aquariums and terrariums.

Trust in your results with a partner you can trust.

Dr. Marcus Crim

Senior Research and Development
Manager of Molecular Diagnostics

IDEXX BioAnalytics is a leading innovator in the field of aquatics, with an expert team led by Senior Researcher Dr. Marcus Crim. We have developed many new technologies in animal health monitoring based on cutting-edge research in response to our clients' needs. We offer a range of aquatic testing solutions for all aquatic species, including a proprietary zebrafish pathogen testing assay for Zebrafish picornavirus (ZfPV1). Our consultative services and best-in-class solutions will support your team in driving your research forward.

Real-Time PCR

Simple. Precise. Fast. State-of-the-art organism detection for quarantine, animal, environmental, and biological testing solutions.

Diagnostic Pathology

Histopathology evaluation by veterinary pathologists with extensive experience in aquatic disease for morbidity analysis in every tissue and species.

Microbiology

Today's fastest and most accurate identification of microbes with MALDI-TOF mass spectrometry (MS) for a more complete microbiological profile.

A support team focused on you.

Consultation

Benefit from complimentary consultation with industry-leading aquatic expertise for customized solutions specific to your facility needs.

Reporting

Reports customized to your preferred formats including pdfs, tabular data and image options.

Questions

Your dedicated account manager will help you get rapid replies to requests and questions.

Logistics

Simplify the submission process with complimentary supplies, online ordering, and shipping support.

Support

Rapid multilingual support for unexpected events to safeguard your facility.
