

Microbiome Analysis

DNA Isolation, Deep Sequencing and Comparative Analysis

Discover deeper insight—order a Microbiome Analysis today.

A Microbiome Analysis includes:

- **DNA Isolation**—from all bacteria in the sample
- **Deep Sequencing**—generates 200-500 megabases of sequence
- **Data Comparison and Analysis**—our bioinformatics produces a comparative analysis to known bacterial sequences
- **Bacterial Identification**—identifies all bacteria present and their relative abundance

Microbiome Analysis features:

- Easy sample collection—submit 2 frozen fecal pellets for mice and rats*
- Quick turn-around—4 weeks
- Cost-effective— \$375
- Expert data analysis and easy-to-use reports
- Analysis is also available for other species including dog, cat, pig and zebrafish

Examples of comparative data analysis reports
